

Old Collinsville Road Reconstruction - Programmed for reconstruction in the summer of 2009, this project was delayed from the summer of 2008 due to difficulties encountered in the coordination with the railroad over the crossing of the tracks near I-64 and other right-of-way issues. The section is just over 1-mile long. The new section will be three lanes wide (center turn lane) with curbing, stormwater improvements and sidewalks. This project is jointly funded by Fairview Heights and O'Fallon.
